1.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your company, Contoso, Ltd., has a main office and a branch office. The offices are connected by a WAN link. Contoso has an Active Directory forest that contains a single domain named ad.contoso.com.

?

The ad.contoso.com domain contains one domain controller named DC1 that is located in the main office. DC1 is configured as a DNS server for the ad.contoso.com DNS zone. This zone is configured as a standard primary zone.

?

You install a new domain controller named DC2 in the branch office. You install DNS on DC2.

?

You need to ensure that the DNS service can update records and resolve DNS queries in the event that a WAN link fails.

?

What should you do?

Create a new stub zone named ad.contoso.com on DC2.

Configure the DNS server on DC2 to forward requests to DC1.

Create a new standard secondary zone named ad.contoso.com on DC2.

Convert the ad.contoso.com zone on DC1 to an Active Directory-integrated zone.

D

2.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your company has a DNS server that has 10 Active Directory–integrated zones.

?

You need to provide copies of the zone files of the DNS server to the security department.

?

What should you do?

Run the **dnscmd /ZoneInfo** command.

Run the **ipconfig /registerdns** command.

Run the **dnscmd /ZoneExport** command.

Run the **ntdsutil > Partition Management > List** commands.

C

3.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the

question.

Question

Your company has a single Active Directory domain named intranet.adatum.com. The domain controllers run Windows Server 2008 and the DNS server role.

?

All computers, including non-domain members, dynamically register their DNS records.

?

You need to configure the intranet.adatum.com zone to allow only domain members to dynamically register DNS records.

?

What should you do?

Set dynamic updates to **Secure Only**.

Enable zone transfers to Name Servers.

Remove the Authenticated Users group.

Deny the Everyone group the **Create All Child Objects** permission.

A

4.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your company has a main office and a branch office. The company has a single-domain Active Directory forest.

?

The main office has two domain controllers named DC1 and DC2 that run Windows Server 2008. The branch office has a Windows Server 2008 read-only domain controller (RODC) named DC3.

?

All domain controllers hold the DNS Server server role and are configured as Active Directory-integrated zones. The DNS zones only allow secure updates.

?

You need to enable dynamic DNS updates on DC3.

?

What should you do?

Run the **Ntdsutil.exe > DS Behavior** commands on DC3.

Run the **Dnscmd.exe /ZoneResetType** command on DC3.

Reinstall Active Directory Domain Services on DC3 as a writable domain controller.

Create a custom application directory partition on DC1. Configure the partition to store Active Directory-integrated zones.

5.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

You have a single Active Directory domain. All domain controllers run Windows Server 2008 and are configured as DNS servers. The domain contains one Active Directory-integrated DNS zone.

?

You need to ensure that outdated DNS records are automatically removed from the DNS zone.

?

What should you do?

From the properties of the zone, enable scavenging.

From the properties of the zone, disable dynamic updates.

From the properties of the zone, modify the TTL of the SOA record.

From the command prompt, run **ipconfig /flushdns**.

A

6.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

You have a domain controller that runs Windows Server 2008 and is configured as a DNS server.

?

You need to record all inbound DNS queries to the server.

?

What should you configure in the DNS Manager console?

Enable debug logging.

Enable automatic testing for simple queries.

Enable automatic testing for recursive queries.

Configure event logging to log errors and warnings.

A

7.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close**

Simulation and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your network consists of an Active Directory forest named contoso.com. All servers run Windows Server 2008. All domain controllers are configured as DNS servers. The contoso.com DNS zone is stored in the ForestDnsZones Active Directory application partition.

?

You have a member server that contains a standard primary DNS zone for dev.contoso.com.

?

You need to ensure that all domain controllers can resolve names for dev.contoso.com.

?

What should you do?

Create a NS record in the contoso.com zone.

Create a delegation in the contoso.com zone.

Create a standard secondary zone on a Global Catalog server.

Modify the properties of the SOA record in the contoso.com zone.

B

8.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the

question.

Question

Your network contains an Active Directory forest. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have an Active Directory-integrated zone for contoso.com.

?

You have a UNIX-based DNS server.

?

You need to configure your Windows Server 2008 environment to allow zone transfers of the contoso.com zone to the UNIX-based DNS server.

?

What should you do in the DNS Manager console?

Disable recursion.

Create a stub zone.

Create a secondary zone.

Enable BIND secondaries.

D

9.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your network consists of an Active Directory forest that contains one domain named contoso.com. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have two Active Directory-integrated zones: contoso.com and nwtraders.com.

?

You need to ensure a user is able to modify records in the contoso.com zone. You must prevent the user from modifying the SOA record in the nwtraders.com zone.
?

What should you do?

From the DNS Manager console, modify the permissions of the contoso.com zone.
From the DNS Manager console, modify the permissions of the nwtraders.com zone.

From the Active Directory Users and Computers console, run the Delegation of Control Wizard.

From the Active Directory Users and Computers console, modify the permissions of the Domain Controllers organizational unit (OU).

A

10.

Multiple Choice Question

In this type of question, you select the correct answer or answers from a list of answer choices.

- Click the **Reset** button to clear all selected answers.
- If an **Active Exhibit** button is present, click it to explore in a simulated environment until you find the information that you need. Then click **Close Simulation** and answer the question.

Notes

Note the following consideration when answering this type of question:

- You might need to use the scroll bar to view the entire contents of the question.

Question

Your network consists of an Active Directory forest that contains one domain. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have an Active Directory-integrated zone.

?

You have two Active Directory sites. Each site contains five domain controllers.

?

You add a new NS record to the zone.

?

You need to ensure that all domain controllers immediately receive the new NS record.

?

What should you do?

From the DNS Manager console, reload the zone.

From the Services snap-in, restart the DNS Server service.

From the command prompt, run **repadmin /syncall**.

From the DNS Manager console, increase the version number of the SOA record.
