

Exam : VCP-410

Title : VMware Certified Professional on VI4

Update : DEMO

<http://www.test4actual.com>

310. The following ESX versions are supported for direct upgrading to vSphere 4 (Choose Two):

- A. ESX 2.1
- B. ESX 2.5.5
- C. ESX/ESXi 3.5
- D. ESX 3.0.0, 3.0.1, 3.0.2

Answer: CD

311. Which of the following explains why backups of ESX 3.x VMs created with VMware Data Recovery take longer than backups of ESX 4.x VMs?

- A. VMware Data Recovery uses data deduplication technology with ESX 4.x VMs, but not with ESX 3.x VMs
- B. VMware Data Recovery uses changed block tracking functionality with ESX 4.x VMs, but not with ESX 3.x VMs
- C. VMware Data Recovery uses the VMware vStorage APIs with ESX 4.x VMs, but not with ESX 3.x VMs
- D. VMware Data Recovery uses Microsoft's Volume Shadow Copy Service (VSS) with ESX 4.x VMs, but not with ESX 3.x VMs

Answer: D

312. A virtual machine performance graph shows the swap. In value to be at 95%, and the Balloon value to be at 0%. Users of the VM are complaining that performance is slow.

Which of the following actions can be done to increase performance of the VM (Choose Two)?

- A. Migrate the virtual machine to another datastore using Storage VMotion
- B. Change the CPU Share value for this virtual machine to High
- C. Install VMware Tools into this virtual machine
- D. Change the Memory Share value for this virtual machine to High

Answer: A,D

313. After upgrading an ESX host to vSphere 4.x from VI3, which of the following three actions should be taken (Choose Three)

- A. Configure ESX host networking
- B. Reconnect managed hosts to VMware vCenter
- C. Update any scripts that reference host sd devices
- D. Configure the ESX firewall
- E. Configure licensing

Answer: B,C,D

314. When removing a role, which of the following applies (Choose Two)?

- A. Users assigned to the removed role can be reassigned to any other existing role
- B. Users assigned to the removed role lose all privileges
- C. Users assigned to the removed role are unaffected, but new users cannot be assigned the removed role
- D. Users assigned to the removed role are automatically assigned the Read Only role

Answer: C,D

315. vSphere 4, when multiple Multipathing Plugins (MPPs) exist, the Pluggable Storage Architecture (PSA) performs which of the following two tasks (Choose two.)

- A. Manages physical path claiming and unclaiming

- B. Associates of physical paths with logical devices
- C. Implements logical device bandwidth sharing
- D. Provides logical device and physical path I/O statistics

Answer: C,D

316. An administrator attempts to connect to the Web Access Client on an ESX Server, but is unable to establish a connection. Which of the following command would resolve the problem?

- A. service vmware-webAccess restart
- B. esxcfg-firewall e webAccess
- C. service vmware-hostd restart
- D. service mgmt-vmware restart

Answer: D

317. An administrator is performing an upgrade on an ESXi Host. Which of the following steps can be used to backup the Host before the upgrade is performed

- A. Use the ESXi Direct Console and select the Host Backup option
- B. Use the vCLI and run vicfg-cfgbackup s to save the ESXi Host configuration
- C. Using the VI Client, attach to the ESXi Host and choost the Backup option from the Configuration Tab
- D. Log on to the ESXi Host directly and execute the esxcfg-backup s option

Answer: C

318. Which of the following are valid sub-profile configurations that may be edited with the Host Profile

- A. Permissions
- B. CPU
- C. Firewall
- D. Storage
- E. Service

Answer: A,C,D

319. When installing vCenter 4.x, where are licenses maintained (Choose Two)?

- A. In a license file on the vCenter Server machine
- B. Within the License Server
- C. In the vCenter Server Database
- D. On the ESX Host

Answer: B,D

320. Which of the following storage resources are created only during an ESX 4.x installation?

- A. VMFS datastore
- B. swap
- C. scratch
- D. vmkcore

Answer: A,C

321. Which of the following circumstances prevents the option of joining a linked mode group during vCenter Server installation (Choose Two)?

- A. An administrator installed vCenter Server instances using different domain accounts
- B. An administrator has vCenter Server instances in multiple domains
- C. An administrator is installing the first of the vCenter Server instances
- D. An administrator is upgrading an existing VirtualCenter Server installation

Answer: A,C

322.Which of the following CHAP security levels is supported with both Hardware and Software Initiators (Choose Two)?

- A. Do not use CHAP unless prohibited by target
- B. Do not use CHAP
- C. Use CHAP
- D. Use CHAP unless prohibited by target

Answer: A

323.A vNetwork Standard Switch has been configured for IP-based Load Balancing utilizing 2 uplinks. A new uplink is added to the switch. How will the additional uplink be configured by default?

- A. The uplink is marked as Unused until it is added to the Active NIC Team
- B. The uplink is placed in Standby mode until it is added to the Active NIC Team
- C. The uplink is considered Active, but will not participate in the Active NIC Team until assigned to a port group
- D. The uplink automatically becomes a part of the IP-based NIC Team

Answer: C

324.Which two are valid network load balancing policies for a vNetwork Distributed Switch (Choose Two)?

- A. route using round-robin
- B. route based on IP hash
- C. route based on the originating virtual port ID
- D. route based on source and destination MAC hash

Answer: C,D

325.A user has permissions to create and manage alarms and tasks for a group of virtual machines. An administrator modifies permissions for the user so that they can no longer create alarms.

Once this change is made:

- A. The user can no longer create alarms and cannot modify or delete any existing alarms
- B. The user can no longer create alarms and cannot delete any existing alarms
- C. The user can no longer create alarms, but can modify or delete their existing alarms
- D. The alarms option is greyed out in the vSphere Client and no alarm related actions may be taken by the user

Answer: D

326.How are new LUNs discovered by an ESX Host?

- A. A manual rescan operation is required every time a new LUN is added
- B. A reboot operation is required every time a new LUN is added
- C. A rescan operation is periodically performed by ESX Hosts to detect any new LUNs
- D. ESX Server automatically detects new LUNs as they are presented

Answer: A

327.Ports on a secondary Private VLAN that communicate only with Promiscuous ports are:

- A. Promiscuous
- B. Community
- C. Trunked
- D. Isolated

Answer: D

328. An administrator needs to be able to define the size of the VMFS partition during installation. Which of the following installation types

- A. text and scripted installations
- B. text installation
- C. graphic installation
- D. scripted installation

Answer: C
